EDUCATION

University of Arizona

Tucson, AZ

B.S. in Computer Science and Mathematics, Minor: Cybersecurity

Aug. 2022 – May 2026

- Relevant Courses: Object-Oriented Programming, Systems Programming, Discrete Structures, Cryptography, Algorithms, Machine Learning, Theory of Probability & Statistics, Stochastic Processes, Linear Algebra

SKILLS

Programming Languages: Java, Python, Swift, C# (.NET), C/C++, TypeScript, SQL, JavaScript, HTML/CSS, R

Frameworks & Libraries: React, Next.js, Angular, FastAPI, .NET Core, SwiftUI, PyTorch, Spring Boot

Data & ML Tools: TensorFlow, scikit-learn, XGBoost, OpenCV, pandas, NumPy, MongoDB, SQL (PostgreSQL, MySQL)

Cloud & DevOps: AWS (S3, Lambda), Docker, Kubernetes, Git, GitHub Actions, Azure DevOps, Vercel, n8n, Linux/Unix

Testing & CI/CD: Postman, Swagger, Unit Testing (JUnit, PyTest), GitHub Actions

Methodologies & Design: Agile/Scrum, SDLC, System Design, Design Patterns

EXPERIENCE

Artificial Intelligence Intern | *FastAPI, React, TypeScript, GPT-4o-mini, n8n, Docker*

Jun. 2025 – Aug. 2025

Genmark AI

Seattle, WA

- Developed an AI-powered Chrome extension to enhance LinkedIn productivity with content insights and engagement tools
- Built FastAPI microservices using LLM APIs for real-time profile analysis, content classification, and comment generation
- Created Chrome extension (Manifest V3) with React/TypeScript and Vite, integrating directly into the LinkedIn interface
- Automated multi-step AI workflows with n8n; optimized backend to under 2 s startup and under 1 s API response times
- Deployed Dockerized services with Uvicorn, ensuring secure auth, environment management, and production-ready APIs

Software Engineering Intern | *FastAPI, MongoDB, GraphQL (Strawberry), Vercel, Next.js*

May 2025 – Aug. 2025

Lynnapse

Remote

- Developed a “Job Tinder” web platform with a team of 4, connecting professors and students at 10+ universities
- Implemented FastAPI with MongoDB/GraphQL (Strawberry), and REST auth managing 1,200+ researcher profiles
- Engineered authentication with JWT/CORS and optimized MongoDB indexing for under 200ms query times
- Deployed scalable containerized services using Docker, Docker Compose, and Vercel with integrated CI/CD pipelines

Undergraduate Research Assistant | *C#, Python, OpenCV, NumPy, Astropy, Raspberry Pi*

Nov. 2023 – May 2025

Steward Observatory | NASA-Funded | Advisor: Dr. Roger Angel

Tucson, AZ

- Processed 5,000+ astronomical images (RAW, TIFF, BMP) and 655 records from 5 CSV star catalogs for analysis
- Built predictive solar-tracking models to estimate heliostat positioning using time-series forecasting and geospatial data
- Developed Python/Jupyter and C# pipelines for star detection, angular distance, and heliostat calibration on Raspberry Pi
- Implemented Git workflows to produce reproducible star catalogs, SIMBAD queries (450+ entries), and calibration plots

Teaching Assistant | *Discrete Mathematics II, Tutoring*

Aug. 2025 – Present

University of Arizona

Tucson, AZ

- Supported lectures by assisting students with problem-solving, clarifying concepts, and guiding discussions
- Held 3 office hours weekly, graded assignments and quizzes, and provided academic support in Discrete Math II

PROJECTS

NYC 311 Escalation iOS App | *Swift, SwiftUI, MapKit, PDFKit, Core Data*

Jun. 2025 – Aug. 2025

- Built an iOS app to flag overdue NYC 311 cases; implemented escalation guide and PDF generator; loads in under 2s
- Computed p50/p80/p90 resolution times by district and complaint type to auto-tag case status and delays
- Generated pre-filled emails and 1-page PDF reports with timeline, location map, and geotagged case photos
- Architected SwiftUI MVVM with Core Data persistence, 24-hour auto-refresh, and daily 8 AM alert digests

ML Trading Simulator | *Python, FastAPI, React/Next.js, TensorFlow, scikit-learn, AWS, XGBoost*

Jan. 2025 – Aug. 2025

- Built an algorithmic trading platform using FastAPI, Python, and React/Next.js with 15+ technical indicators
- Implemented 7 ML models (LSTM, XGBoost, RF, SVM, Logistic, KNN, GBoost) with TensorFlow and scikit-learn
- Designed strategy engine combining 3 indicators with weighted configs, simulating trades on \$10K capital
- Developed backtesting framework with 365-day data, 6 performance metrics, and Plotly visualizations

Anomaly Detection Platform | *Java, Spring Boot, React/Tailwind, PostgreSQL, WebSockets, AWS*

Jun. 2025 – Nov. 2025

- Designed full-stack supply-chain dashboard (Java/Spring Boot, React/Tailwind) with live WebSockets alerts
- Processed 10K+ shipments monthly with event-driven architecture achieving under 500ms alert notification times
- Deployed 5 containerized microservices on AWS ECS with health checks, load balancing, and auto-scaling
- Implemented RBAC, audit logging, and tenant data isolation for secure multi-partner supply chain tracking
